

SHARK SD card update Quick Guide

Updating the CJ4 using the SD card in the SHARK expansion module. This is a simple and fast way to update without having to update the SD card and CJ4 individually.

IMPORTANT NOTES:

A) If you have saved any snapshots, applications or files in the SD card's "SD EXTRAS" and "WAVEFORMS" folders, **BEFORE** you delete all the files in step 4, copy/save them to a folder in your PC desktop. **AFTER** the new update files have been copied into the SD card, copy/paste the saved files back into the "SD EXTRAS" and "WAVEFORMS" folders in the new update files.

B) Make sure that the old files are removed from the SD card before the new are copied; having duplicate files with the same name will cause the CJ4 to reboot continuously. If this happens, update the CJ4 individually using the USB cable and latest PKG update that has the "usb" in the file (example: *PKG24_usb.zip*).

C) Please follow all steps, omitting any part will cause an incomplete update or operational problems.

- 1-** Download the latest PKG update package for the SHARK module from our website,
- 2-** Decompress the file onto the PC desktop,
- 3-** Remove the SD card from the SHARK module,
- 4-** Using a built-in or external SD card reader, delete all the files in the SD card,
- 5-** Copy and Paste all the files inside the update folder of the new update into the SD card,
- 6-** Reinstall the SD card into the SHARK module and then the module into the CJ4,
- 7-** Power-On the CJ4 (with the USB cable or the OBDII cable) and in the main menu select the MODULE icon, press ENTER, the update to the CJ4 should start automatically, do not interrupt,
- 8-** When the update has finished (about 5 minutes), power off the CJ4 and then back on, then when pressing the module icon the vehicle makes will display and the update has been completed.
